

# Field Integrated Time System

## How to Get Field Time That's Fully Integrated With Sage 100 Contractor

**A** number of years ago, our clients went looking for an electronic field time collection program that was fully integrated with Sage 100 Contractor. When their needs couldn't be met, we wrote our field integrated time (FIT) system. First, it has to work with Android and iOS phones, as well as tablets and through a browser. Next, the field crews are construction professionals, not IT people or bookkeepers—minimal effort with maximum impact. Now, the kicker—it's fully integrated with Sage 100 Contractor; that's our specialty since we've been writing S100C custom integrations since 1996. Add our AWS modern stack and 35 years serving contractors, and we have ecstatic clients!

**“** *FIT is efficient and adapts to our situation. It not only saves time, but prevents a lot of mistakes and headaches.*
